

# Using the Olympus 3D effect function

## Step 1

Insert an Olympus xD-Picture Card in your camera, making sure the camera's 'Panorama' function is activated.

## Step 2

To extend your 'Olympus Master 2 Software', download the xD-Picture Card Pack from the internet at [www.olympus-consumer.com/en/consumer/download](http://www.olympus-consumer.com/en/consumer/download). The installation requires to input the Serial Number of your card, found in the box.

## Step 3

Art and 3D icons will now appear. Select any single image displaying the 'P' icon and apply the 3D effect. Using the 3D glasses you can now enjoy 3D effect images.
